Acceleration	Automated Test Coverage	Burndown (Sprint/Release)	Defect Containment
Defect Escapes	Defect Resolution	Cycle Time	Lead Time
Release Frequency	Velocity		

NDIA/INCOSE/PSM Continuous Iterative Development and Sustainment WG

DSB #3b: Measures for CID NDIA WG Recommendations

Picture of Suc	cess (end state)
Consensus frameworks	 Objectives first - measures aligned and tailored from information needs, goals and constraints, at program and enterprise levels
Modernized measures	 Migration toward consensus alternatives to traditional waterfall and phase-based SW measures (LOC, EVM, milestones,) Derived from SW factory processes, automated by toolchain Basis for measuring cost and schedule vs. plan
History- based estimates	 Repositories collect performance-based measures (e.g., WBS, staff, cost, productivity) supporting future comparisons, basis of estimates, proposals, and program monitoring

Excerpt of measurement-related recommendations from NDIA WG for implementing DSB findings

CID: Continuous Iterative Development EVMS: Earned Value Management System LOC: Lines of Code WBS: Work Breakdown Structure

Back		Baseline	Factory Cycle Time	Deploy	ment		Te	Field to Recovery		
Measures for continuous iterative development should be aligned	Tickets -		Lead Time			4				
development should be aligned with information needs,	Backlog -		Code com	mitted to use	Vulnerability			Time to Rep	pair	
objectives and constraints, at program and enterprise levels	Release n-1 - Vulnerability -		tional Test	Regression Test (Automated)	Latent Defect Escape	Detection Time	Diagnosis	Repair Time Te	Return to Normal Operations	
Measures, goals, and priorities are tailored based on program objectives and information need	ts	Start (Sprint, Epi	c, Release) (Spri	End int, Epic, Release)		urs	rated S Factory	tart	Resun	ned
The NDIA WG recommends a measurement framework that can be adapted to specifics of the program, domain, or acquisition	Process Metrics (Example		 Developm ted test coverage detection efficienc; gs caught in test v 		(inte	Operations rnal, externa nge failure rate ack deployed coo				
framework that can be adapted to specifics	Metrics		ted test coverage detection efficience	of specs/code Y	(inte	rnal, externa				
framework that can be adapted to specifics of the program, domain, or acquisition	Metrics (Example		detection efficienc: gis caught in test v dback Avai ess, instrume ess) by	of specs/code Y	(inte · Cher (rolb ted tai	rnal, externa	ie) measures on needs	Enterprise measures driven by business performance objectives	Success is measured at multiple levels: •Mission capability •Program execution	

Measures for CID should be aligned with information needs and constraints, at program and enterprise levels

Recommendations for Path Forward:

Initiative	Action Plan							
Software measurement framework for CID	Validate measurement framework (objectives, categories, measures) with Government and industry stakeholders (e.g., NDIA, INCOSE, PSM, SERC) Finalize initial consensus measures for software CID Pilot and validate measures/analysis on selected CID /DevSecOps programs. Develop contracting language requiring measurement set for future programs							
WBS-based estimating of historical comparables for staff, cost, productivity	 Recommend DoD expand WBS-based approach and historical DB measures to additional programs but at program level and <u>not specific to continuous</u> <u>software initiatives</u> (doubtful consistent data yet exists). Engage Government stakeholders on historical data estimating initiatives Partner with independent cost estimate (ICE) groups to migrate away from SLOC-based methods (CAPE, PARCA, ICE,); establish partnerships with industry for new methods (DSB #3) Consider alternatives to EVM for managing performance vs. plan. Review EVM agile studies, publications, and guidance. Hold workshops with Industry and Government to define framework and measures. Recommend consensus approach for DoD software acquisition 							
Reach consensus on cost and schedule measures vs. plan for software CID

					MTTF (Failure)
					Ao (Operational Availability)

ICM Table (Draft) Excerpts most relevant to PSM CID workshop – 3 of 3

Information Categories	Measurable Concept	Team Information Need	Product Information Need	Enterprise Information Need	Potential Measures
Process Performance (Process Effectiveness)	Process Efficiency - Speed Security - Safety		How quickly can new security vulnerabilities be patched and deployed to fielded products?		Security vulnerability lead time Mean Time to Restore
	Process Efficiency - Speed Supportability - Maintainability Dependability - Reliability		How quickly can we address bug reports from the field?		Mean Time to Restore MTTD
	Process Efficiency - Speed	Is the team performing as expected?	Are teams performing as expected?		Velocity (average story points per increment) Capacity (staffhours per increment) Story points delivered vs. committed (on average) Cumulative flow diagrams
	Process Efficiency - Speed		How long does it take to deploy an identified feature/capability?		Lead time
	Process Efficiency - Speed		What is the frequency of product release or deployment?	What is the frequency of product release or deployment?	Release or deployment frequency
	Process Efficiency - Speed	How long does it take to release a viable product?			Release frequency Cycle time (increment, release, mean/median) Time to Minimum Viable Product (MVP)
	Process Efficiency - Speed		How much time does it take to conduct a full regression test? How much time for the automated regression test?		Test duration Automated test duration
	Process Effectiveness			How much of the testing is automated? How often do we perform automated testing?	Automated test coverage Automated test frequency
	Process Effectiveness	Is the backlog being managed appropriately?	Is the backlog being managed appropriately?		Cumulative flow diagram Backlog readiness
Customer Satisfaction	Customer Support		How long does it take to get a viable product released? (specific)	How long does it take to get a viable product released? (multiple systems) - time to market	Time to Minimum Viable Product (MVP)

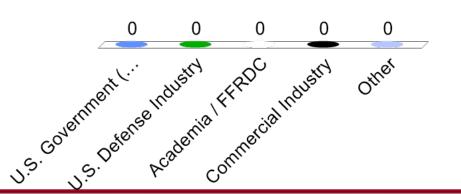

We would like your feedback on the draft framework for continuous iterative development

- Information needs interactive feedback in this session
- Candidate measures deferred to breakout session
- How should we measure size?

How would you best characterize your organization?

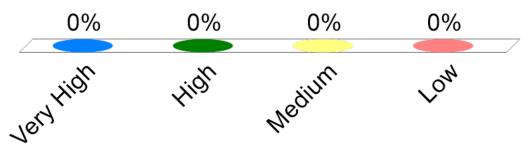

- 1. U.S. Government (DoD, agency)
- 2. U.S. Defense Industry
- 3. Academia / FFRDC
- 4. Commercial Industry
- 5. Other

Are new story points, features, or capabilities being delivered as committed?

- 1. Very High
- 2. High
- 3. Medium
- 4. Low

Information Categories	Measurable Concept	Team Information Need	Product Information Need	Enterprise Information Need	Response
Schedule and Progress	Work Unit Progress (team, product) Milestone Completion (enterprise)	Are story points delivered as committed?	Are features delivered as committed? Are we still on track to deliver all features per roadmap? (on plan)	Are capabilities delivered as committed?	Counter

Do delivered products provide the expected functionality to users when needed?

Thank you!

- Potential measures will be evaluated at the breakout workshop
- We are seeking volunteers to help refine and publish the PSM framework for continuous iterative development

Thank you also to those that participated in the prior survey (PSM, NDIA, INCOSE, SERC) of candidate information needs and measures

- They helped to inform our progress for the current work
- Summary analysis provided in backup charts (briefing and workshop)

26. Is Sprint Burn a useful and effective measure?		27. Is Epic and Release Burndown a	useful and effective measure?	28. Is Velocity a useful and effective	asure?	29. Is Cvcle Time (Control Chart) a useful	d effective measure?	30. Is Cumulative Flow a useful and	effective measure?	31. Is 'Time from program launch to deployment of simplest useful	functionality' a useful and effective measure?	Time to field high p	(spec > obs) a userur and en ecuve measure?	33. Is 'Time to fix newly found security	(Tina > ops) ⁻ a userui and ure?	34. Is 'Time from code committed to code	in use' a useful and effective measure?	s 'Time required for fu	test (automateo) [,] a userui and effective measure?	36. Is 'Time required to restore service after outage' a useful and effective	ure?	ted test	specs / code a userur and enecuve measure?	38. Is 'Number of bugs caught in testing vs. field use' a useful and effective		39. Is 'Change failure rate (rollback	deployed code)' a useful and effective measure?	

Measurement Survey Integration and Analysis

	Evaluation a	nd Ranking of D	SB Measures										
Category:		Response Rate			Deploym	ent Rate		Respon	se Rate	Co			
Category Rank	3	4	5	5	4	1	6	2	1	2	1	3	
Overall Rank	8	14	11	9	6 1		13	10	2	4	3	12	
	Velocity (Control Chart)		,		Time to Field High Priority Functions (incr lead time)	Time to Fix New Security Hole (patch cycle time)	Time from Code Commit to Use (factory cycle time)	Time for Automate Regression Test (reg test cycle time)	Time Required to Restore Service (MTTR)	Automated Test Coverage of Test Specs / Code	# of Bugs Caught in Test vs. Field (defect containment)	Change Failure Rate (rollback)
